

LEGRAND RELEASES IP-BASED RF LIGHTING CONTROL DRIVERS FOR CONTROL4, ELAN AND RTI HOME AUTOMATION SYSTEMS

MIDDLETOWN, Pa., December 17, 2018 – Legrand, the global leader in AV infrastructure, networking and digital systems, announces three new IP-based drivers that will simplify the integration of its radiant® and adorne® lines' RF lighting control with Control4, Elan and RTI home automation systems.

The new drivers eliminate the need for RS232 to RF interfaces for third-party integration, saving time and money in installations. Now Legrand's LC7001 Whole House Lighting Controller will work as a bridge that can communicate with the Control4, Elan and RTI control systems.

“These new IP-based drivers offer a new level of simplicity and cost savings for integrators implementing our RF lighting solution,” said Fritz Werder, Legrand's VP/general manager for the Nuvo and On-Q lines. “Seamless control integration combined with Legrand's differentiated radiant and adorne RF lighting devices offer a winning combination for integrators looking to deliver more value to their custom home owners.”

Legrand RF lighting controls are a simple whole-home solution for custom integration projects, with a comprehensive line of dimmers, switches, scene controllers and plug-ins. Available in the unique and stylish designs of the radiant and adorne Collections, devices can be mixed and matched for the ultimate in fit and finish. Based on a proprietary RF protocol, these devices offer robust and consistent lighting inside and outside the home to address security, comfort and entertainment needs. Advanced functionality is offered in devices such as Legrand's Tru-Universal dimmer that works with any 120V dimmable lamp, load, or fixture, allowing integrators to have one dimmer on their truck for all their lighting needs, including LED's.

The drivers are available for download from the Legrand website via this link: <https://www.legrand.us/ong/rflighting-third-party-drivers.aspx>.
