Secure-24 Upgrades Managed Cloud Architecture to Offer Flash Storage Solutions

Multiquip is one of the first Secure-24 clients to migrate to flash storage

LAS VEGAS, April 13, 2015 /PRNewswire/ -- An advanced flash storage cloud environment enabling companies to process heavy workloads at faster speeds is being introduced here at Collaborate 15, booth 1217, by Secure-24, a leading provider of application hosting and managed cloud services.

Secure-24 (www.secure-24.com) has invested heavily in the new flash storage architecture and has implemented it across its cloud data centers in Michigan and Nevada. The company can now offer its clients the perfect balance between high-performance and cost effective storage options.

Flash storage is particularly ideal for customers running heavy workloads on mission critical applications including SAP, Oracle and custom enterprise applications. It will help eliminate storage based performance issues allowing companies to accelerate their business by alleviating long process run-times for reporting and reducing the need for costly performance tuning and troubleshooting. It also has advanced security features that encrypt data at rest to help provide maximum security without sacrificing performance.

"There's an increasing demand to store large quantities of data – and make it easily accessible at a moment's notice," said Scott McIsaac, CTO, Secure-24. "Our IT transformation expert team, armed with a suite of enterprise diagnostics and rapid assessment methodology, can provide detailed guidance in helping organizations achieve IT stabilization, consolidation and optimization for core applications and infrastructure."

Secure-24's flash storage solutions have been benchmarked at increasing performance up to ten-fold while remaining cost-competitive with its existing storage solutions. Clients will have the option of adopting a flash storage solution or a capacity-based storage solution. The two-tier approach allows clients to migrate heavy workloads to flash, while continuing to run lower performance applications on a lower cost storage solution.

Secure-24 is a pioneer in offering flash storage to its customers. Among the early adopters of Secure-24's new service is Multiquip, a Carson, Calif.-based manufacturer and supplier of world class quality industrial products and solutions.

"Secure-24 saved us a tremendous amount of engineering hours by researching, planning and delivering our IT environments on next generation flash storage infrastructure," said Michael Hanken, vice president of IT at Multiquip. "First tests showed that the speed and performance of Secure-24's flash solution will save us significant time on all of our database intense transactions and reports."

To help businesses assess and migrate to this enhanced flash storage architecture, the company has enhanced its Premier Services group to include cloud transformation services. The group will advise on IT discovery, stabilization and consolidation. It also helps clients undergoing large organizational changes such as a merger, acquisition or divestiture as well as evaluates current IT environments and explores the performance gains companies may receive from flash storage solutions.

For more information about Secure-24's flash storage capabilities or Cloud Transformation Services, please visit its show booth #1217 or contact Andrew Bradbury, business development manager at Secure-24, at andrew.bradbury@secure-24.com.

About Secure-24
Secure-24 has 14 years of experience delivering managed IT operations, application hosting and cloud services to enterprises worldwide. Its industry-leading client satisfaction rates result from comprehensive service level agreements and a focus on superior service and support. The company is an SAP certified Hosting, HANA and Cloud partner and an Oracle Platinum Partner managing Oracle E-Business Suite, PeopleSoft, JD Edwards and Hyperion applications across all industries for businesses of every size.

Secure-24 has been named one of Computerworld's 100 Best Places to Work in IT. Visit www.secure-24.com to learn more about Secure-24 products and services.
