

Legrand Unveils Bluetooth Receiver for On-Q Digital Audio System

Unobtrusive Model Expands Wireless Streaming from Phones, Tablets and other Portable Devices

HEBRON, Ky., October 11, 2016 – Legrand, the global specialist in electrical and digital building infrastructures, announced the availability of the AU7100-xx Bluetooth Receiver, which further expands wireless music streaming capability to the company's On-Q Digital Audio System. The AU7100-xx streams content via Bluetooth 4.0 with A2DP v1.2 and APTX for superior wireless audio quality.

Legrand's On-Q Digital Audio System delivers exceptional listening experiences with built-in digital source variety, convenient in-wall amplified keypads, aesthetic app control, and high-quality sound through an easy-to-install structured wiring design. It is simple, scalable, repeatable and can distribute feature-rich audio in up to sixteen zones throughout a home or other facility.

"The On-Q Digital Audio receiver makes it easier than ever to stream music from any device - your smartphone, tablet and any other portable Bluetooth source through the On-Q Digital Audio System," said Fritz Werder, Legrand VP/general manager, On-Q and Nuvo lines. "Its plug-and-play design offers a powerful and affordable addition to our structured wiring multi-room audio solution."

The AU7100-xx is a small and unobtrusive device that plugs easily into the system via either a Global Source Input (AU7007) or Local Source Input (AU7008). It is available in three colors, including white, light almond and nickel, to color coordinate with either source input. To enable multiple units to be deployed in a single digital audio installation, the AU7100 is designed with one thousand unique device names that can be uniquely identified by a Bluetooth-enabled source device.

The AU7100-xx is currently available for an MSRP of \$59.00.
